Professional Summary

CompTIA Security+ certified cybersecurity student with hands-on experience in networking, Active Directory, security operations, Windows/Linux administration, vulnerability assessment, and digital forensics labs. Experienced in technical documentation, troubleshooting, and team communication through four years of management experience. Seeking an entry-level cybersecurity, SOC analyst, IT support, or help-desk role.

Skills

- Networking: VLANs, routing, DHCP, DNS, TCP/IP, Cisco IOS and Fortinet/FortiGate basics
- Windows/AD: Active Directory, certificate services, Group Policy, user/group management, RADIUS/NPS, DNS/DHCP
- Security Concepts: Incident response, vulnerability assessment, security operations, access control
- Security Tools: Nmap, Autopsy, Nessus/OpenVAS, Wireshark, Nagios
- Linux Administration: SSH, Apache, Samba, LAMP deployment, Docker basics, user and group management, service management
- Offensive Security: Reconnaissance, service enumeration, web application testing basics, password auditing, controlled-lab exploitation

Work History

3rd Assistant Manager

10/2022 to Current

McDonald's Restaurant – Rocky Point, NY

- Supervised daily operations, ensuring adherence to company policies and procedures.
- Trained new team members on customer service standards and operational workflows.
- Coordinated inventory management, optimizing stock levels to reduce waste.
- Implemented training programs that improved team efficiency and service quality.

Education

Associate of Applied Science: Cybersecurity

05/2026

Suffolk County Community College - Selden, NY

- 3.6 GPA
- Relevant Coursework: Intranetworking & Infrastructure, Client Operating Systems, Security Operations, CCNA Security, Information Security Capstone.
- Phi Theta Kappa Member

Certifications

CompTIA Security+ Certification - https://www.credly.com/badges/f2f7faea-16ef-46b4-975c-246108642d5c/public_url

Projects

Capstone Course Project

- Developed a virtual lab environment to strengthen infrastructure, networking, vulnerability scanning, and system administration.
- Used both Windows and Linux hosts, tested connectivity, and performed regular security assessments.
- Documented entire process including screenshots, findings, and remediation steps in a finalized technical report.

Active Directory & Domain Services Project

- Built a Windows Server 2022 Active Directory lab environment with multiple domain controllers, domain-joined clients, and test user accounts
- Created and managed organizational units, users, groups, and permissions to simulate a real-world environment with services such as DNS and DHCP
- Configured Network Policy Server as a RADIUS server to centralize authentication through Active Directory.

Digital Forensics Project

- Conducted a digital forensic investigation using a variety of tools such as Volatility and Autopsy to analyze systems and find artifacts, files, and user behavior.
- Reviewed user behavior, file metadata, and memory artifacts to construct a timeline of events in order to support investigation findings.
- Documented all findings in a professional technical report along with screenshots, evidence notes, and a conclusion.
